

Carboline around the world

Global marine asset protection solutions

Jack-up barges - Rushan, China. Jack-up barges involved in offshore oil & gas operations are protected by a two-coat system including a primer coat of Carboguard 890 and a finish coat of glass-reinforced Carboguard 890 GF. The EPC's tight schedule required sourcing coatings manufactured in China for timely delivery.

M/V Debmar Atlantic – Luderitz, Namibia. Temperature differentials inside the engine room of this diamond mining vessel created condensation on piping that led to a slip hazard. Carbotherm 3300 was applied to the piping, stopping the condensation and eliminating the risk to crew members.

M/V Maersk Wyoming – Bahrain. Crews of the Wyoming and three sister ships in service in the Middle East experienced uncomfortable heat inside the vessels' wheelhouses resulting from punishing sun on their flying bridges. A three-coat system consisting of Carbomastic 15 primer, Carbotherm 3300 insulative coating, and Carbocrylic 3359 finish contributed to a 25°–30°F (14°–16°C) reduction in temperature that dramatically improved crew comfort.
